NEW!

Introducing Hyfire's Fire Control Panels with Groundbreaking Wireless Mark Level Integration!

We're pleased to announce the arrival of our own branded fire control panels that seamlessly integrate with our existing fire devices.

Available in different variants, with a full range of peripherals and options, our Hyfire panels are based on Advanced's range, but with unique firmware and programming tools tuned for our products.

- **Enhanced Control** : Take full command of your fire safety network like never before. Our control panels offer intuitive interfaces and advanced features for unparalleled control and monitoring.

- **Customised Solutions** : Tailored to fit your specific needs, the Hyfire panel range makes it quick and easy to go from a small, one loop site with a small number of wireless devices, to a huge panel networked site with complicated cause and effect, ensuring your fire safety system aligns perfectly with your requirements.

- **Reliability Redefined** : Trust in Hyfire's reputation for reliability. Our fire control panels are built to withstand the test of time, ensuring consistent performance when it matters most. The Hyfire control panel is EN54-2 & -4 approved by FM Global and EN54-13 by IMQ.

EN54-2
EN54-4
EN54-13

Our control panels fetch wireless signal strength of the radio devices and displays it into the panel, making it on-hand available for installers and end users, for easy operation from installation to maintenance.
